B.A. Undergraduate Course Descriptions

FIRST YEAR

Semester 1

EC135 Principles of Microeconomics

The objective of this course is to introduce the basic concepts and principles of economic theory, and to illustrate how these principles can be used to analyse various issues and problems in everyday life. The following will be covered: Microeconomics: decision making of individual households and firms, markets for goods and factors of production. Various topics will be analysed using micro economic theory.

Semester 2

EC136 Principles of Macroeconomics

The objective of this course is to introduce the basic concepts and principles of economic theory, and to illustrate how these principles can be used to analyse various issues and problems in everyday life. The following will be covered: Macroeconomics: national income accounting, models of the macroeconomy, applied economics. Various topics will be analysed using macroeconomic theory.

Year Long

EC137 Economics Coursework

The course consists of tutorial attendance, application of economic techniques, continuous assessment in economics and completion of assignments as prescribed by lecturers during the year. This course requires students to attend lectures in Principles of Microeconomics and Principles of Macroeconomics.
